

Setup for RA to SQL convertor

Note: this guide is meant for windows, but program will run on any system with the prerequisites.

SQL requirements

MySQL community dev installation

Actively running SQL server (setup for localhost by default)

Python requirements

Python 3 Install *Installing from Windows Store will add python to path by default*

- mySQL-Python
- pyodbc
- mysql-connector-python

Can be installed by running:

```
pip install mySQL-python  
pip install pyodbc  
pip install mysql-connector-python
```

Usage

```
python c:/Your_Path/DB20/main.py
```
